TRAFFIC SENSOR

BlueVia is a traffic sensor developed to calculate and make available driving time information without requiring any expertise in either installation or configuration.

## Wireless, connected and easy to install

The device, with very low consumption, scans all Bluetooth devices within a radius of 150 m. Its technology anonymizes and provides the data formatted on the secure Webvia platform, to calculate travel time between the sensors.

- Calculates the travel time
- Determine origins / destinations

A device designed A to Z

## Master reliable and responsive data

- **Receive** early information on any disturbance
- **Understand traffic flow**
- **Anticipate** future management needs
- **Update** traffic control devices

## WebVia, a dedicated platform

Data is provided in real time and the shareable content to other services or partners, including permissions, can be revoked at any time by the operator.

- Real-time display
- Customizable
- Multisupport and multinavigation
