

Transport PID – TFT FIRST

Ensure the best level
of information for the
passengers of the metro
network in Santiago de Chile

Santiago
Chile

SANTIAGO METRO LINE 6:

15.3
km of track

10
stations

2,600,000
passengers across the
entire network

APPROACH

- ▶ Voted best underground system in the Americas in 2012, the Santiago Metro in Chile is expanding and modernising. Line number 6 now offers larger and clearer stations, automatic platform gates and automated metro trains. This means that passenger information needs to be the very best to ensure a perfect passenger service. LACROIX City has deployed its TFT displays and touchscreen totems for line 6 of the metro.

CHALLENGES

- ▶ Better level of information for the passengers as they are travelling around on the metro
- ▶ Offering displays with modern designs while providing a high level of protection and safety
- ▶ Enabling a new form of interaction between users and the metro network through touchscreen totems distributed throughout the stations on line 6
- ▶ Enabling the metro network to disseminate other information for user comfort: journey times, alerts, maps, points of interest, station map, information for tourists, etc.

RESULTS

- ▶ 42" TFT displays installed in all stations and all platforms on line 6, as well as touchscreen display totems with 42" screens
